

Perforator Panel

A-One Oil Perforator Panel is a key part of oil well logging tools. It mainly controls and manages signal transmission and execution during perforating operations. It connects surface equipment to downhole perforating devices, supplying power and signals to ensure perforating accuracy and safety. Usually including functions like power management, signal selection, and voltage regulation, it adapts to harsh downhole conditions and is widely used in well completion.

Specifications

General Spec	
Dimensions	260mm*306mm*130mm(L×W ×H)
Input voltage	AC185 ~ 264V
Output voltage	0 ~ 300V
Current	0 ~ 2A Adjustable
Weight	5kg
